

## **Auryn Resources commences trenching and submits drilling application on the Huilacollo Project, Peru**

**Vancouver, British Columbia – September 12th, 2017 – Auryn Resources Inc.** (TSX: AUG, NYSE American: AUG “Auryn” or the “Company”) is pleased to announce that it has initiated extensive surface work at its Huilacollo Project located in Southern Peru in advance of an initial drill program expected to commence in Q4, 2017.

The surface targeting work, which includes an aggressive trenching and soil survey program, commenced in the northern half of the Huilacollo project (see Figure 1). The goal of this program is to further define significant extensions to the existing gold mineralization in advance of drilling. This work commenced on the back of recently completed revised surface agreements with the local communities which provide long-term access to the project.

The Company has also submitted the required drill permit applications for the program. Once approved, the drill permit will allow for up to 20 drill pads and is designed to target resistivity highs and chargeability lows coincident with oxide gold mineralization (see Figure 1).

Michael Henrichsen C.O.O. and Chief Geologist commented, “We are very pleased that we were able to achieve long-term agreements with the two communities within the Huilacollo project area which will allow us to rapidly advance the project. We strongly believe there is excellent potential for additional oxide gold discoveries across the project area and are excited to be conducting our own systematic work programs as we move toward drilling.”

Other Peru updates:

Auryn is actively pursuing long-term surface rights agreements on the balance of its Peruvian Portfolio including the Sombrero and Baños del Indio properties. Once completed, extensive surface work will commence and in some properties resume, which will be followed by initial drill programs.

Canada update:

In Nunavut, the Company is expecting its second batch of Committee Bay results shortly followed by the geochemical surface results from its Gibson MacQuoid project (located approximately 100km northwest of Agnico Eagles’ Meliadine deposit).

At Homestake Ridge, Auryn has drilled at total of 7,000 meters to date in 15 drill holes along target structural corridors. The first batch of results is expected in the month of October.

Shawn Wallace, President and CEO, commented, "It's a very exciting time for Auryn shareholders with drill results pending from two projects in Canada and soon from Peru. We believe the opportunity for discovery in Peru represents an exceptional opportunity for value creation and is a strong complement to our high-grade Committee Bay and Homestake projects."

The Company has approximately \$15 million in cash less immediate payables and is financed through the planned programs in 2017.

Michael Henrichsen, P.Geo, COO of Auryn, is the Qualified Person who assumes responsibility for the technical disclosures in this press release.

ON BEHALF OF THE BOARD OF DIRECTORS OF AURYN RESOURCES INC.  
Shawn Wallace

President and CEO
