# Tier One Investment Highlights

## STRONG FUNDAMENTALS

- ✓ **Quality Asset:** Flagship project, Curibaya, is on a world-class porphyry belt, directly surrounded by some of the largest discoveries in the world including: Cerro Verde (Freeport), Toquepala (southern Copper), Quellaveco (Anglo), Cuajone (Southern Copper)
- ✓ **Excellent High-Grade Results:**
  - Initial surface sampling programs at Curibaya returned phenomenal high-grade samples of silver, gold and copper over a 4 km x 5 km alteration system that reached **298,000 g/t Ag and 940 g/t Au**
  - The 2021 maiden drill program returned multiple significant intercepts, **including 1.5 m of 1,129 g/t silver, 1.04 g/t Au and 1 m of 1,431 g/t Ag, 0.39 g/t Au\***
  - Uncovered the potential for a large Porphyry Copper system
- ✓ **Peru, Favorable Mining Jurisdiction:** Access to infrastructure: low elevation (1900m), close proximity to the coast, easy accessibility, drill permitted
- ✓ **Experienced Team:** Leadership with a track record of monetizing discovery success for shareholders: Keegan Resources and Cayden Resources
- ✓ **Low Valuation, Primed for Re-Rating:** Current entry point provides tremendous upside potential as we look to progress flagship project and enhance portfolio of projects.

# Curibaya - Drilling Highlights

## TARGETING STRUCTURAL CORRIDORS

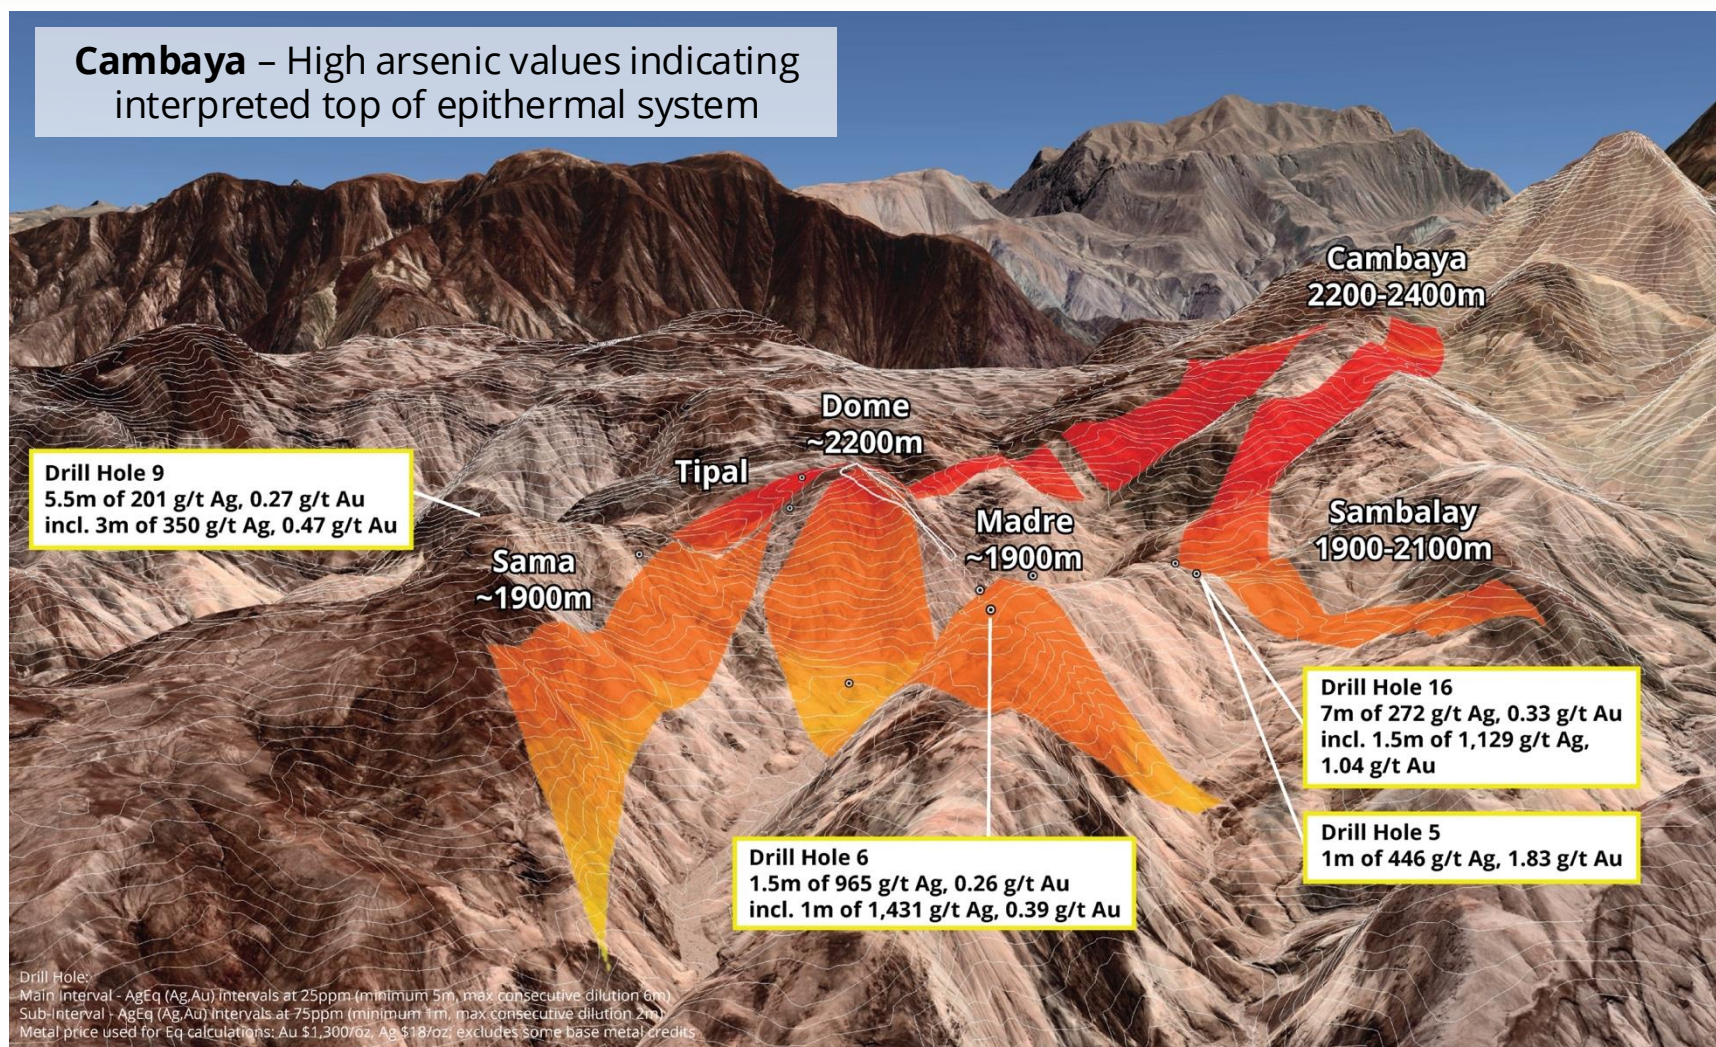

- 30% of the holes in the inaugural drill program at Curibaya hit high-grade intercepts
- New DIA exploration permit includes the Cambaya region in the northern portion of the project, which will be targeted in the second drill program

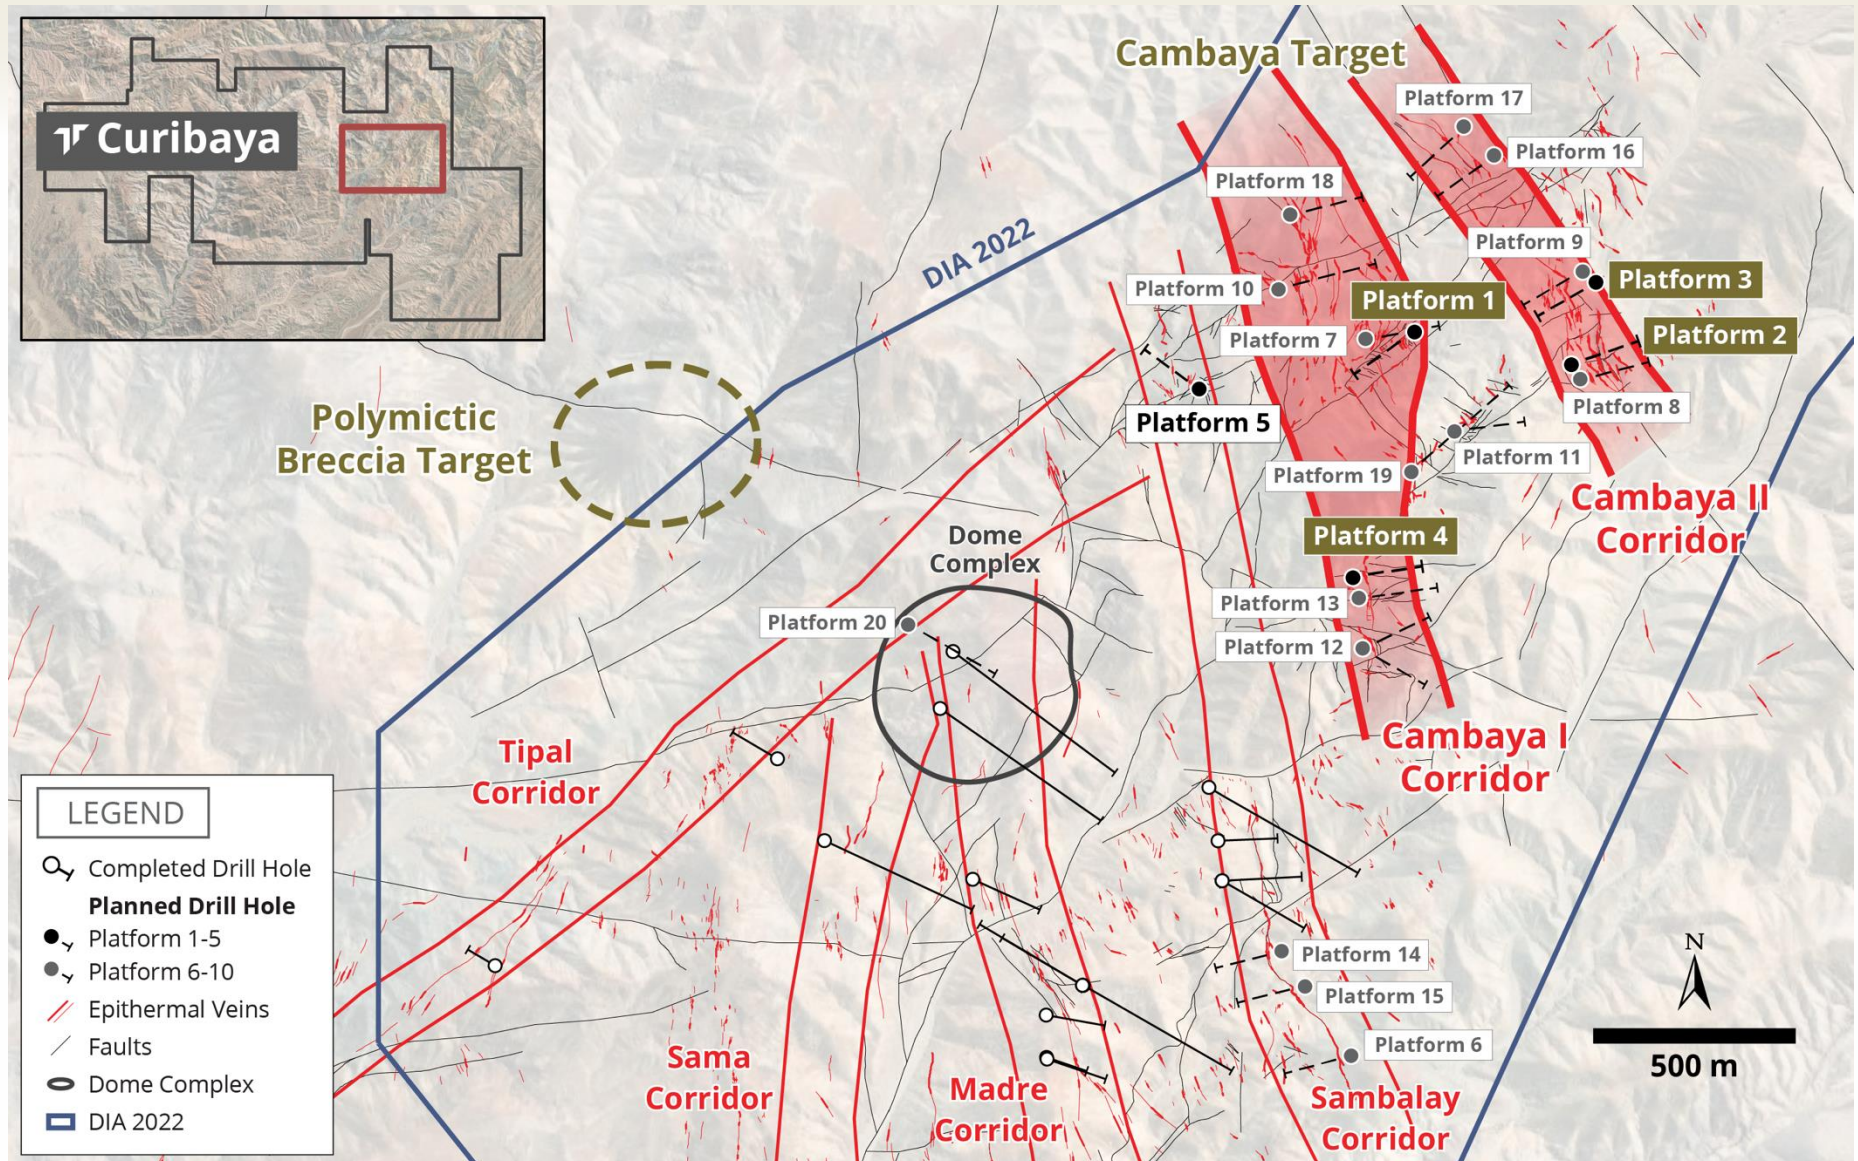

## ELEVATION CONTROL ON MINERALIZATION

- The Cambaya region is approximately 300m - 400m higher in elevation than phase 1 drilling
- Less erosion allows for a larger window of preserved epithermal mineralization
